The Moon

Example The planet we ...*live*... on is one of nine planets. It's a very
11 big ball of rock and from space it looks a blue
12 planet in white clouds. This is because of it is
water. The moon is the nearest thing to us in space and it's a lot
13 smaller than planet. Sometimes we can see all of
14 the moon but..... other times we can only see part of it.
This is because during part of the month the moon is between
15sun and us and at other times it's further away. There's
16 no air or water on the moon and.....means it's very
17 difficult to go there. Only a few people.....been to the
moon. When they go, they have to wear space clothes and
18air and water on their backs. They don't fly *off* into
19 space.....their clothes are heavy. Perhaps in the future
20 people..... live on the moon.
